

Instructions

1. Mark your quiz.
2. Complete the "How Did I Do?" sheet.
3. Return this sheet to Mrs. Craig.
4. Bring your marked quiz and the "How Did I Do?" page to your teacher for a quick interview.

Foundations of Math 10 LG 4/5 Ver A

/20

**Expectation #1: Determine prime factors, greatest common factors, and least common multiples of whole numbers.**

1. Determine the Greatest Common Factor (GCF) of the following: 18, 30, & 54. (1 mark)

$$\begin{array}{c}
 18 \\
 \swarrow \downarrow \\
 (2) \times 9 \\
 \swarrow \downarrow \\
 (3) \times 3
 \end{array}
 \quad
 \begin{array}{c}
 30 \\
 \swarrow \downarrow \\
 (2) \times 15 \\
 \swarrow \downarrow \\
 (3) \times 5
 \end{array}
 \quad
 \begin{array}{c}
 54 \\
 \swarrow \downarrow \\
 (2) \times 27 \\
 \swarrow \downarrow \\
 (3) \times 9 \\
 \swarrow \downarrow \\
 3 \times 3
 \end{array}
 \rightarrow \text{ANS. } \underline{\underline{6}}$$
  

$$\rightarrow \text{GCF} = 2 \times 3 \text{ (Common Factor)}$$

2. Identify the Least Common Multiple (LCM) of the following: 6 and 8. (1 mark)

$$\begin{array}{c}
 6 \\
 \swarrow \downarrow \\
 2 \times (3)
 \end{array}
 \quad
 \begin{array}{c}
 8 \\
 \swarrow \downarrow \\
 (2) \times 4 \\
 \swarrow \downarrow \\
 (2) \times 2
 \end{array}
 \quad
 \text{LCM} = 2 \times 2 \times 2 \times 3 = \underline{\underline{24}}$$
  
ANS. LCM = 24

**Expectation #2: Determine the common factor of polynomials.**

3. Factor completely. (2 marks each)

a)  $4x + 12$  GCF = 4  
 $4(x + 3)$

b)  $21xy^3 - 14x^2y^2$  GCF =  $7xy^2$   
 $7xy^2(3y - 2x)$

4 marks

6. Identify binomials that represent the length and width of the rectangle. Then calculate the length and width of the rectangle if  $x = 5\text{cm}$ . (2 marks)

$$\text{length} = (x - 3)$$

$$\text{area} = x^2 - 7x + 12$$

$$\text{width} = (x - 4)$$

Factor:  $x^2 - 7x + 12$

$$(x - 4)(x - 3)$$

Substitute  $x = 5$  into both binomials:

$$(5 - 4)(5 - 3)$$

$$(1)(2)$$

$$\begin{array}{cc} \downarrow & \downarrow \\ \text{length} & \text{width} \end{array}$$

$$\begin{array}{l} \text{length} = \underline{\underline{2\text{cm}}} \\ \text{width} = \underline{\underline{1\text{cm}}} \end{array}$$

**Expectation #4: Factor a difference of squares (special trinomial).**

7. Give an example of a difference of squares and then factor the expression. (2 marks)

$$x^2 - 4 = x^2 - (2)^2 = (x - 2)(x + 2)$$

OR:  $x^2 - 9 = x^2 - (3)^2 = (x - 3)(x + 3)$

OR:  $x^2 - 16 = x^2 - (4)^2 = (x - 4)(x + 4)$

⋮  
etc.

**Expectation #3: Factor trinomials.**

4. Determine two values of  $b$  that allow the following expression to be factored:

(2 marks)

$$x^2 + bx + 8$$

Factors of 8:

- 1, 8
- 2, 4
- 1, -8
- 2, -4

4 Answers:

- ①  $(x+1)(x+8) \rightarrow b=9$
- ②  $(x+2)(x+4) \rightarrow b=6$
- ③  $(x-2)(x-4) \rightarrow b=-6$
- ④  $(x-1)(x-8) \rightarrow b=-9$

5. Factor completely.

(2 marks each)

b)  $x^2 - x - 20$

$$\underline{\underline{(x+4)(x-5)}}$$

b)  $x^2 + 6x + 9$

$$\underline{\underline{(x+3)(x+3)}}$$

(8 marks)

c)  $2x^2 + 5x - 12$

CHECK: NO G.C.F.

So,  $2x - 12 = -24$   
 $\frac{8}{8} + \frac{-3}{8} = 5$   
 $\frac{8}{8}x - \frac{3}{8} = -24$

$$\begin{array}{l} 2x^2 + 8x - 3x - 12 \\ \hline \text{FIND G.C.F.} \quad \text{FIND G.C.F.} \end{array}$$

$$2x(x+4) - 3(x+4)$$

$$\underline{\underline{(2x-3)(x+4)}}$$

d)  $9x^2 - 21x + 6$

CHECK: G.C.F. = 3

So,  $3[3x^2 - 7x + 2]$

$$\begin{array}{l} 3x^2 = 6 \\ -1 + 6 = -7 \\ -1x - 6 = +6 \end{array}$$

$$3[3x^2 - 6x - x + 2]$$

FIND G.C.F. FIND G.C.F.

$$3[3x(x-2) - 1(x-2)]$$

$$3[(3x-1)(x-2)]$$

$$3(3x-1)(x-2)$$

/10
